Energy Efficiency - Plant & Services

Test all motors before installation & save time and money.

Save thousands of dollars and time by catching any faults before installing a new or repaired motor. See unbalanced phases that will cost you more money in energy use and shorten the life span of your motors.

Trouble Shoot.

Stop Guessing! Know Now! Know what the trouble is in a few minutes! Electrical or mechanical? Turn-to-turn fault? Connection Problem? Phase unbalance? Dirty windings? Short to ground?

Test electric motors & connections at start up.

Research shows that 1 in 100 motors have some faults and should not be put into service. Avoid unnecessary start-up labor and material costs. Use test results to create a professional bill of health report and avoid future warranty claims.

Repair Shop

Sort your incoming repairs.

Save hours of work per day and see your costs go down and profits go up! No need to clean and bake before determining the fault(s).

Give your customer top quality service.

Take the MOTOR GENIE® with you when picking up repairs or making a sales call. Help your customer (and yourself) by trouble shooting or by settling a warranty claim on site.
